

Provost & Pritchard Brownfields

Provost & Pritchard Consulting Group and its staff have over 30 years of experience providing professional services to public organizations to rehabilitate and restore blighted properties. Together with private parties and local, state and federal agencies, we have assessed and, when necessary, provided feasibility studies, health risk evaluations and environmental engineering and remediation services to over 100 sites throughout Central and Northern California.

Redevelopment and revitalization of underutilized and blighted properties requires a wide range of professional, technical and administrative services to evaluate the potential for redevelopment, assess properties, develop and manage funding opportunities, and if necessary, remediate individual sites. Our staff are well versed in the practice of regulatory negotiation and have represented many clients while working with the Regional Water Quality Control Board, Department of Toxic Substances Control Board, San Joaquin Valley Air Pollution Control District, U.S. Environmental Protection Agency, and other regulatory agencies to successfully redevelop Brownfields properties for the public good.

Services

- Environmental Site Assessments (Phase I and II)
 - Soil
 - Groundwater
 - Soil vapor Intrusion
- Regulatory consulting
