Our specific needs are referenced below. However, we are always interested in hearing from people who share our core values, work ethic and commitment to client service. If you have talents and skills that complement any of our service areas, we would love to hear from you, even if the positions listed below don't exactly match your background.

Please send resume to: hr@ppeng.com or apply online.

Agricultural or Civil Engineer / Soil Scientist – Regulatory Specialist

Experience: 10+ years

Office: Visalia

This position works with clients to achieve compliance with regulatory issues. Advises clients on upcoming legislation, regulations and policies which may affect client business and operations. Assists and/or engages on behalf of the client to help shape regulations or to guide their implementation or interpretation.

Requirements: Licensed Agricultural or Civil Engineer in the State of California; and/or Certified Professional Soil Scientist, Certified Crop Advisor, or Certified Professional Agronomist. College degree in Agricultural Engineering, Soil Science, or related discipline; Farming background or experience desired.

CAD Technician – Senior Level

Experience: 8+ years

Office: Fresno

This position performs complex and non-routine drafting assignments under limited supervision. Assures formatting is consistent with company drafting standards. Applies, adapts, or extends company standards to new applications as necessary. Ability to follow directions and prepare CAD drawings from hand sketches, notes and verbal instructions. Completes work in a timely manner and communicates on progress of work assignments to supervisor. Checks work before delivering final work product to supervisor. Takes pride in work and delivers a high quality work product.

The position for Senior CAD Technician includes: collaboration with CAD manager; assisting with updating and developing new company standards; and staying current with technology and software upgrades. Ability to mentor and train technical staff on Civil 3D, company CAD standards and basic preparation of civil engineering plans. Ability to supervise other technical staff on drafting assignments.

Requirements: High School diploma or equivalent. Certification/degree in AutoCAD or Civil 3D preferred. Minimum of eight years work experience with AutoCAD and two years of work experience in Civil 3D in an engineering firm or similar environment. The ideal candidate has experience preparing plans in the field of civil engineering using Civil 3D. Strong computer skills with the ability to learn new methods and programs; Demonstrated proficiency and efficiency in use of the most recent versions of AutoCAD and Civil 3D; Excellent oral and written communication skills required; Proven ability to write technical information using appropriate grammar, punctuation and spelling. Must be able to perform routine mathematical calculations. Client service oriented; Ability to follow directions, work in a team environment and work independently on assigned tasks.

Municipal Engineer- Senior or Principal Level (commensurate with experience)

Experience: 5+ years licensed

Location: Visalia

This position will champion the continued development of municipal work for the Company, pursuing projects in this arena. Will oversee project work and assist in mentoring and training engineering staff.

Requirements: Must hold an active CA PE license; 5+ years experience leading and directing work teams in project planning and design, bringing positive results. Demonstrated business development success and project management experience are required. Existing relationships and contacts in public and private sectors of the Central Valley are required.

Surveyor Manager

Experience: 10+ years

Office: Clovis, Fresno or Visalia

We are looking for someone to help grow our survey department. This position performs a wide variety of roles, including project planning and research, field and office related surveying tasks, client relationship management and business development. Applicants should have significant experience with a wide range of land surveying from field to office. Responsibilities beyond surveying and project management include developing and maintaining client contacts before, during and after project completion.

Requirements: CA Professional Licensed Surveyor required; BS in Geomatics/Surveying desirable; proven track record for securing work and maintaining client relationships; having a current book of business is a plus. Must have excellent communication skills and be a self-starter, motivated individual. Experience with and knowledge of local and state land surveying **requirements. Central Valley** business ties and contacts required. This position may require occasional out-of-office travel during work hours and periodic evening or overnight assignments.

Water Resources/Agricultural Engineer – Senior Level

Experience: 10+ years

Location: Bakersfield, Los Banos and Modesto

To be considered for the position candidates must demonstrate they are willing and able to be part of a dedicated team of engineering professionals who specialize in serving agricultural entities and irrigation districts throughout California's Central Valley. Candidates must show an understanding of water resources engineering and be able to apply their knowledge in a practical manner.

We expect serious candidates to have a thorough understanding, interest and broad experience in areas such as:

- Irrigation District Operations
- System Modernization
- Groundwater Management, Recharge and Banking
- Environmental Compliance Issues
- Project Funding
- Water Rights
- Developing Feasibility Studies
- Project Planning and Design
- Public Works Construction Contracts
- Water Transfers and Exchanges

This position will actively pursue and lead projects on ag/water related client issues and requests. Duties will involve project planning, engineering consulting and design, client contact and project management.

Requirements: Must hold an active CA PE license or licensed in another state and be willing to sit for CA license within 18 months of hire; 10 years experience leading and directing work teams in studies, investigations, and designs bringing positive results. Demonstrated business development success and project management experience required. Experience with irrigation districts and knowledge of California water rights and water systems preferred. Occasional field work and overnight travel are required.
